Continuously active disinfection.¹

For 24 hour protection even after multiple touches.

The first and only EPA approved disinfectant to protect against ESKAPE pathogens¹ for up to 24 hours. Protect your patients, staff and facility with confidence and control, even between disinfection protocols.
Contaminated surfaces play a large role in the transmission of pathogens.²

Surface environments in healthcare settings act as reservoirs from which pathogens can easily be transmitted to patients, staff and visitors. The higher the bioburden on a surface, the greater the risk of healthcare-associated infections (HAIs).³ These include ESKAPE pathogens, which are responsible for over 40% of HAIs in the healthcare environment.

Disinfection reduces contamination by killing pathogens that lead to HAIs. But with many disinfectants, pathogens can be reintroduced onto a surface after the first touch.

**Sani-24** disinfectant minimizes the risk of HAIs by forming a protective shield on surfaces to kill ESKAPE pathogens for up to 24 hours.

---

**Continuously Active Disinfection (CAD): Revolutionary technology that helps break the chain of surface re-contamination.**

---

Standard disinfectants and **Sani-24** Disinfectant immediately kill pathogens on surfaces. When used as directed, **Sani-24** disinfectant applies an antimicrobial shield that continues to disinfect surfaces for up to 24 hours. With standard disinfectants, pathogens can immediately contaminate a surface as soon as they come into contact with it. **Sani-24** disinfectant is the first and only option that provides Continuously Active Disinfection (CAD), breaking the chain of surface re-contamination.

Unlike standard disinfectants that allow pathogens to continue to re-colonize until the next time the surface is disinfected, **Sani-24** disinfectant with CAD continues to protect surfaces against ESKAPE pathogens for up to 24 hours.
The first and only EPA-registered disinfectant with continuously active disinfection (CAD), providing the ability to control HAI causing microorganisms.

When used as directed, **Sani-24 disinfectant** provides an antimicrobial shield that is clinically proven to disinfect surfaces for 24 hours.²³

Wipe and spray formats provide 1 minute disinfection for a broad spectrum of organisms.

Effective against SARS-CoV-2 (COVID-19).

Bactericidal and virucidal.⁴

Quat Alcohol formulation is compatible with a broad range of surfaces and equipment in the healthcare environment.⁵

Spray is ideal for soft-surface sanitization.

**Sani-24 disinfectant** is ideal for high touch/high traffic areas such as:

- WAITING AREA
- NURSES STATION
- ELEVATOR AREA
- RAILINGS
- LIGHT SWITCHES
- DOOR HANDLES

Ready to use wipe and spray for 24 hour protection and ongoing confidence between disinfection protocols.
1. CAD addresses Acinetobacter baumannii MDR (Multi-drug resistant), Enterobacter aerogenes, Enterobacter aerogenes MDR (Multi-drug Resistant), Enterococcus faecalis VRE (Vancomycin resistant enterococcus), Enterococcus faecium MDR (Multidrug Resistant), New Delhi metallo-beta-lactamase-1 (NDM-1) producing Klebsiella pneumoniae (CRE – Carbapenem resistant Enterobacteriaceae), Pseudomonas aeruginosa, Staphylococcus aureus, Staphylococcus aureus (Methicillin Resistant) (MRSA).

4. Sani-24 spray is effective against TB with a 3 minute contact time and Sani-24 wipe is effective against TB with a 5 minute contact time

5. Refer to device manufacturer’s instructions for use.
